

'BUT WE'VE ALREADY GOT SOMEONE WHO DOES THAT...'

'WE HAVE A WEBMASTER WHO IS SUPPOSED TO KNOW ALL ABOUT SECURITY...'

'OUR SOFTWARE VENDOR WILL PROTECT US FROM PROBLEMS...'

'IT'S OKAY, THOSE THREATS DON'T AFFECT US...'

Like many other famous last words, those who live by the above statements often don't know that they are about to have a very bad day.

Information and financial security breaches are a matter of **when**, not **if**. If you are not using *Sûnnet Beskerming* services, then you are not doing all that you can to minimise the damage that will be caused when you finally experience a breach.

Sûnnet Beskerming have repeatedly proven that they can beat other vendors and specialist teams to the threats that matter, when it matters. Can you afford to fall behind?

THE PROBLEM

If companies with multi-billion dollar annual turnover can't get security measures right, what makes you think you can?

If 10% of your employees would happily give away your company secrets for free, and 50% believe that you would never find out that they stole confidential data*, what makes you think that you can outsmart them? (* - industry figures)

It doesn't matter how good you are, some day you will be breached. When you are breached, will you know that your data has been stolen?

If Information Security software vendors are blaming conflicts with other software for their failure to work, and all software is vulnerable to known attacks, how will you respond?

Internet users are being taken to court and are facing major fines based on suspected illegal activity that was traced to their network connection. Do you know enough about the security of your connection and the technology behind it to defend your innocence?

THE FACTS

- **Liability rests with you** - When a breach happens, you won't be able to shift liability to any software or hardware vendor.
- **Who will you call?** - Try calling the major vendors when you suffer loss or damage - you won't get very far.
- **You can only stop what you know about** - If you don't know about the threat probing your network, you aren't going to see it until it is too late.
- **Can you face the press?** - High profile breaches guarantee press attention, none of it good.

The solution is *Sûnnet Beskerming* services.

CHOOSE THE RIGHT SOLUTION

If you store or work on sensitive personal or financial data, you need *Sûnnet Beskerming* services to protect what is important to you and your clients.

Unless you have teams of people dedicated to researching new threats, you aren't going to catch them all before they hit you. *Sûnnet Beskerming* services allow your experts to make informed, rapid and accurate decisions.

Major companies and institutions that already have other Security services, such as **NASA, major international banks, insurance companies, and top Information Security companies** benefit from *Sûnnet Beskerming* services, and so can you.

Contact us today to get started with proper Information Security protection.

WE BUILD RELATIONSHIPS, NOT CLIENTS
